PAOLO PERROTTA

B3844 - PYTHON FOR BUSINESS LAB

2025/26

DAY 2

ALMA MATER STUDIORUM
UNIVERSITÀ DI BOLOGNA

IN THE PREVIOUS LESSON...

- Public Service Announcements
- A general introduction
- Notebooks and other ways to run Python
- Module 1: Numeric Types
- Module 2: Strings

THE PLAN FOR TODAY

- Module 3: Variables and Assignment
- Module 4: Types and Conversions
- Module 5: Calling Functions

3. VARIABLES AND ASSIGNMENT

VARIABLES

- Assignment
- Variables contain values
- Naming conventions
- Reassigning a variable
- String interpolation

NOTEBOOK: VARIABLES AND ASSIGNMENT

10’

- **Open** `https://github.com/nusco/python-unibo/`
- **Run through the “Variables and Assignment” notebook**

4. TYPES AND CONVERSIONS

TYPES

- **Every value has a type**
- `type()`
- **Implicit conversions**
- **Converting numbers to strings**
- **Converting strings to numbers**
- **Conversion errors**
- `print()`**’s little secret**

USER INPUT

- `input()`

NOTEBOOK: TYPES AND CONVERSIONS

20’

- **Open** `https://github.com/nusco/python-unibo/`
- **Run through the “Types and Conversions” notebook**

5. CALLING FUNCTIONS

FUNCTIONS

- Example: finding the length of a string
- Example: converting a string to uppercase
- Functions and methods
- Immutable objects

ARGUMENTS AND RETURN VALUES

- Arguments and receivers
- Return values
- Chaining calls

NOTEBOOK: CALLING FUNCTIONS

50’

- **Open** `https://github.com/nusco/python-unibo/`
- **Run through the “Calling Functions” notebook**
